

# RELEASE the **beast** WITHIN

**Your production processes are waiting to expose the advantage hidden within.**

- **Plants almost never run at their potential capacity**  
*Your plant is likely to already have additional unused productivity built in*
- **During commissioning, deadlines mean the plant is built to run**  
*But rarely at its optimum*
- **Bottlenecks in your process can greatly reduce production**  
*Once identified can be corrected at low cost*
- **Over time plants can grow in an uncoordinated way**  
*Better integration can result in increased throughput*
- **Plants age (and not always gracefully)**  
*Further benefits will be available even if your plant has been 'optimised' in the past*

**MIPAC can release the hidden advantage of your process. You can increase throughput and yield, decrease waste and cost and defer capital expenditure.**

**Talk to MIPAC about what our Process Advantage will mean to your business – and RELEASE the **beast** WITHIN**
